

Intelligent Trailer Tracking Solutions

Knowing the location of high value assets in transit can be vital for many logistics operations. For others, tracking the movements of their trailers can improve efficiency of their operations, reduce costs and improve productivity.

Fleetstar-Online and AssetLocator already provide market-leading tracking solutions for over 1500 companies that need visibility of their vehicle fleets. With the addition of either an integral battery powered or solar powered tracking unit, companies can now track both powered and non-powered assets using the same application.

Cybit's trailer tracking units are specifically designed to transmit the location of powered and non-powered trailers using either the Fleetstar or AssetLocator web-based applications.

As both AssetLocator and Fleetstar-Online can track powered assets such as tractor units, trucks and vans, businesses can view both powered and non-powered assets on the same screen. This extends to businesses all the benefits of Cybit's vehicle tracking solutions and delivers greater control over assets.

Key Benefits

- More effective management of goods across the supply chain
- Reduced 'standing' times
- Improved management and utilisation of assets
- Enhanced security and response to theft or loss
- Compare locations of powered and non-powered assets on the same screen
- Improved visibility and control at operational level
- Rapid return on investment

AssetLocator trailer tracking unit

Tracking your Assets with AssetLocator

The AssetLocator trailer tracking unit is easy to install, designed to operate in harsh conditions and features up to 5 years battery life. No specialist training is required to install the unit and units can be quickly removed and reused with ease. The unit can even be painted to disguise its location. Once expired, batteries can be easily replaced.

Once activated, the unit can accurately position the vehicle using GPS location technology. This data is then transmitted by GSM or GPRS at intervals that can be remotely adjusted according to the customer's needs.

	Polling frequency	Estimated battery life*
Minimum usage	1 per day	5 years
Low usage	4 per day	3 years
High usage	24 per day	6 month
Track mode (Stolen Asset)	1 every 10 mins	1 month

*Estimates assume continued use at these levels

AssetLocator Web-based Application Key Features

- User-friendly
- Highly secure
- Trailer locations are viewed against street level maps
- Historical data can be stored and easily accessed for analysis
- User-defined locations can be added and viewed on the map
- Easy-to-use administration site allows organisation of fleets and users

AssetLocator has a first class range of reports that are easy-to-use yet extremely comprehensive. This allows management of trailer movements and standing times. Reports can also be customised to suit clients' needs.

Tracking your assets with Fleetstar-Online

The Fleetstar Trailer Tracking Unit is a robust, weatherproof solar-powered unit that is wholly self-contained and can be fixed to most rigid and curtain-sided trailers.

The unit takes and transmits a GPS position once an hour. Using the Fleetstar web-based application, users can access the extended suite of comprehensive asset tracking reports to gain ultimate visibility of their trailer movements.

With position reports every hour, the Fleetstar unit is ideal for businesses that need detailed information on their trailer movements. This level of information is often required for businesses that are tracking high-value goods in transit.

Additional benefits

- Track and manage a wide range of assets using an easy to use web based application.
- Gain visibility of high value goods in transit, and track stolen/lost consignments
- AssetLocator and Fleetstar-Online have been developed by Cybit, the UK's leading telematics service provider (TSP).

Fleetstar-Online Web-based Application

Key features

- Journey replay mode
- Customised reports
- Email reporting function
- Geofence alerting function
- Live traffic information
- Secure multi-user access
- Unlimited users
- Available in English, German and Swedish languages

European coverage

Both applications feature European coverage with market-leading street-level mapping. With offices in the UK, Sweden and Germany, Cybit is ideally placed to support organisations requiring pan-European telematics support.
